Remarks: I/O type 4 depending on device suffix, /4 = 100K, /5 = 50K, otherwise NO pull-up.

I/O type 2, 4 and 5 may need a pull-up on floating input pins.

Some ATF16V8B had errors on the TL866II Plus but not on the GALEP-4.

Do select the full name in the programmer A, B, C, D, H, Q, or CQZ, BQL version !

Otherwise you will get programming errors !

TOP family also select the correct speed -15 or -25 and /4 or /5 ! Check Position Tab !
