

Modification CPU09RAM card for UPS backup.

Drill 4 holes 0.9 mm.

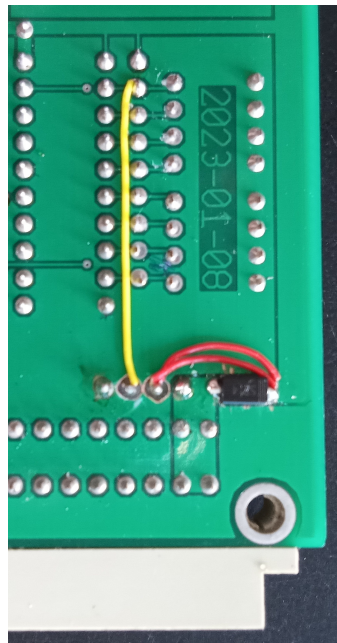

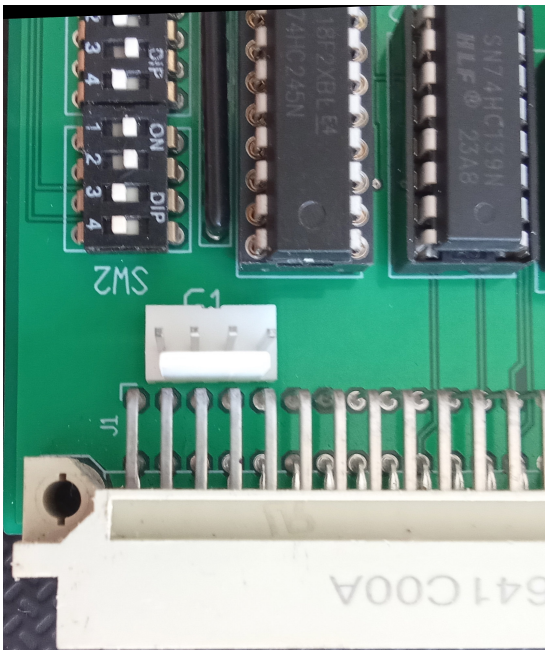

Remove some ground layer on both sides.

Cut the +5 Volt trace.

Place the KF2510A-4pin male header.

Place the SS14 diode and the wires.

All done.

You can use the card now with or with the power backup.

Connector pins: 1 = VCC system
2 = VCC card
3 = Power failure
4 = ground
